Methodology & Approach

Methodology and Approach:

- Sample size: 6,111
- Confidence level: 99percent and MoE of 1.66percent
- The Electoral Commission's 2020 voters register was used as sample frame.
- 30 percent of constituencies from each region was randomly selected and allocated the regional quota based on total voters in each of those constituencies.
- The results of the primaries and general elections head-to-head are based on "likely voters" model (both registered and unregistered voters) and exclude responses of voters who have indicated that they will not vote.
- The poll is cross-sectional and was carried out in 82 out of the 275 constituencies in all the 16 regions.
- Demographic analysis of the results would have a MoE above the overall poll's MoE.
- Field interviews were conducted between 30th June to 7th July 2023.
